

why I'm exited for Hytale

Hytale is a game being developed by the company Hypixel Studio's, the company that created the popular Hypixel Minecraft server. As you might be able to guess the game has some similarities to Minecraft, how similar are they. the information from this game was from the Hytale website.

Hytale is, a building game similar Minecraft. While there are some obvious similarities from what we know about the gameplay there are plenty of differences in the game. The game has a single player mode along with multilayer mini games.

First let's talk about the single player. The game's single player has you exploring the game's procedurally generated world with several biomes, from lush forest, freezing ice lands, to scorching desserts. the game has several creatures with different behaviors. For example, the Trorks, a race of Orc like creatures with different rolls from hunter to chieftains

.In terms of multiplayer I don't know much but it seems like it could be fun. The game's multiplayer consist of mini games created by both players and maybe Hypixel (but i couldn't find anything about them creating minigames). Hytale is built for competitive play with a anti cheat system, tools to create minigames, and parental controls.

The best thing about Hytale to me is the Hytale Model Maker, or HMM. HMM was made using the modeling software as a base to work off of. One of the few things i know could find about HMM is that more than one person can edit a model or animation on different computers.

My biggest fear for Hytale is how the Internet will react to the game and more information. People will often over exaggerate things to build excitement. The problem with this is that people can have unrealistic expectations . The only thing I can say is keep your expectations realistic .

So overall, I'm really exited for Hytale. the creatures and world seem interesting, the creation tools seem powerful, and the things I am able to assume from the trailer get me exited to see what the game will be like when it releases, just keep your expectations reasonable.

From what I can tell the youtube channel called Hytale News is a good source of information on the game. credit to the Hytale News Discord server for this image
